## **DEPARTMENT OF ECONOMICS**

### **BEST PRACTICE**

**Title: Farmer Friendly Activities**

**Objective:**

To promote farmer-friendly practices, E-crop enrollment survey, focusing on raising awareness about organic farming, conducting soil tests, and educating students on the advantages of using millets.

**Context:**

The need for sustainable agricultural practices in the region. It aims to enhance soil health, reduce dependency on chemical inputs, and diversify crop cultivation for better resilience against changing climatic conditions.

**Evidence of Success:**

The program has witnessed a significant increase in E-crop enrollment, adoption of organic farming methods, with a notable improvement in soil quality observed through regular testing. Additionally, students have shown a keen interest in millets, leading to enhanced crop diversity.

**Problems Encountered:**

Challenges faced include initial resistance to change, limited access to organic inputs, and the need for ongoing support and training. Additionally, some farmers encountered difficulties in adjusting to new techniques.

**Resources Required:**

requires trained agricultural extension workers, soil testing kits, organic farming inputs, educational materials, and demonstration plots. Financial support for initial setup and continuous monitoring is essential.

**Further Scope:**

Expanding the program to neighboring areas and providing advanced training on organic farming techniques, alongside the introduction of crop-specific best practices, can amplify the impact of this initiative.

**Note:** This report highlights the successful implementation of farmer-friendly practices, emphasizing organic farming, soil testing, and millet cultivation. It underscores the need for ongoing support and resources to ensure sustained success and encourages future expansion to benefit a wider farming community.
